

eBOL is a bridge to your digital future.

With M.Folio, eBOL is more than digital documents and electronic signature capture. M.Folio digitally orchestrates drivers from arrival through departure to increase throughput, reduce dwell time, improve load visibility, and optimize facility labor – all while creating a more sustainable supply chain.

➔ Increase Driver Throughput

- Self-service driver check-in and mobile in-cab communication replace physical interaction between drivers and facility staff.
- Improve driver throughput by 25% with flexible workflow automation to eliminate driver waiting and keep drivers in their cabs.
- Electronic signature and proof of delivery captured digitally via mobile phone, tablet, or kiosk.
- A configurable data analytics, visibility, and alerting engine provides deep insight into driver workflow steps to unlock yard bottlenecks.

Increase driver throughput by
25%

➔ Optimized Facility Labor

- Replace driver and facility staff face-to-face interaction at the guard shack and shipping office with self-service workflows.
- Eliminate administrative labor associated with printing, sorting, filing, and storage of physical paperwork.
- Flexible workflow configuration allows for elegant exception handling to real-world challenges.

Reposition
30%
of admin & gate staff.

➔ Enhanced Visibility

- Cloud document storage with permission-based access to easily share documents and data with partners, carriers, and suppliers for shared workflow and data visibility.
- Flexible API engine to connect M.Folio data with a WMS, TMS, & YMS, creating visibility at the critical juncture between inventory in motion and inventory at rest.
- With a proprietary OCR and AI-guided identification, M.Folio identifies, groups, and extracts data from documents and pictures, leveraging the data for multi-system and multi-company workflow execution, like claims processing.
- Configurable carrier-specific dwell time alerts virtually eliminate detention costs.

Reduce detention costs by
60%

➔ Improved Facility Safety

- Contactless workflow with driver kiosks and/or in-cab check-in replaces face-to-face interaction between drivers and facility staff.
- FastPass mobile check-in keeps drivers in their truck, removes gate congestion, and reduces the risk of accidents in the yard.

Replace driver-staff interaction by
100%

M.Folio is battle proven with the world's premiere manufacturers and retailers, with enterprise deployments across more than 250 facilities processing over 500k drivers per month. Implementation is fast and easy with no driver app to manage and support, no EDI or complex integration, and it's a native SaaS solution, so no infrastructure required. M.Folio takes as little as 2-4 weeks to configure, install, train, and implement, providing immediate time to value and ROI.

eBOL built for the real world.

Whether your carriers support digital bills of lading or still require paper, M.Folio enables a fully digital workflow for your organization with the flexibility to handle operational exceptions.

M.Folio Deployment Options

Indoor & Outdoor units available.

Self-Service Driver Kiosk

The optional M.Folio Driver Kiosk offers organizations a bridge from the realities of today's operations to a fully digital, contactless, and efficient future. The kiosk provides self-service check-in and printing functions for drivers that require paper, as well as the ability to ingest inbound paperwork, without requiring drivers to download an app or leverage specific technology.

FastPass In-Cab Mobile Check-In

M.Folio FastPass provides drivers with the ability to speed through the workflow and complete all activities in-cab. The driver scans a QR code at the gate and is ushered through the complete workflow from the convenience of their digital phone or device. No download required.

Bring Your Own Device (BYOD)

While kiosks and FastPass in-cab check-in are the most efficient solution for the majority of facilities, some sites are a better fit for a 'bring your own device' deployment model, utilizing tablets, laptops, or even RF devices. M.Folio's extensible architecture allows any web-enabled device to connect and seamlessly manage document and driver workflows.

All fully managed by MacGregor Partners with 24/7/365 U.S.-based support.

MacGregor Partners is a leading warehouse technology company, providing expertise and software to the world's top companies.
